Concept and The way forward to support **ASEAN ESC Model Cities Program Phase 2**

Plenary 1/Day 1
5th High Level Seminar on ESC
28 Feb. – 1 Mar. 2014
Surabaya, Indonesia
By Lun Kanel

Waste Management is the critical Aspect of ESC Model City

Contents

- Background/Problems
- Objective
- Phase 1 Achievement Projects:
 - ESC Mechanism ,MoE
 - Plastic bags Reduction, Phnom Penh
 - Organic Waste Reduction, Siem Reap
- SWOT analysis
- Recommendation for the next step

Waste Management is the critical Aspect of ESC Model City

Objective(s)

- To promote the development of ESC in Countrywide by recognizing the good urban development practices and promoting mutual learning among local governments.
- To identify good practices of Model Cities and promote them to other cities within the country.

Activities of the project

1. The First Meeting of PCOWR

- To discuss on the project plan and design schedule,
- To find out and prioritize the markets to promote the pilot sites,
- To design the awareness campaign for promoting the project.

Activities

2. The Small Workshop and second internal meeting

- discussion of PCOWR
- To promote the project implementation in organic waste reduction,
- To promote the reduction of plastic bags,
- To encourage people in good sound management of waste and integrate within cleaning the city.

Activities

3.The Clean Environment Day (The Organic Waste Reduction Project was introduced to the public)

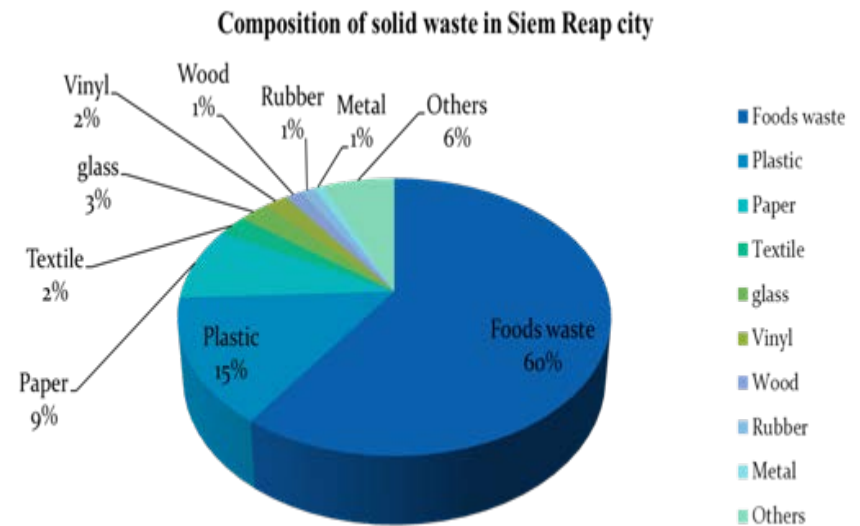

- To promote 3R approach for all levels of people in province.
- To promote the reduction of plastic bags use.
- To encourage people in packaging and storing their own waste in good manner

Activities

4. Workshop on Evaluation of Organic Waste Reduction under ASEAN ESC MODEL CITIES

- To evaluate the project implementation through the project demonstration sites in Siem Reap city,
- To identify the good practices of Model Cities in order to promote them into other cities,
- To identify the impacts and problems facing during the project implementation,
- To find out the challenges and needs to be implemented for the next projects.

The Evaluation Workshop on Organic Waste Reduction under ASEAN ESC Model City programme

Workshop evaluation

- To evaluate the project outcomes in implementation of the Demonstration Project.
- 3 selected markets in the Siem Reap City is the project area.
- others related issues
- To find out challenges, the needs and recommendations for the next step.

Waste Management is the critical Aspect of ESC Model City

CAMBODIA, Accomplishment Project in Phase I

#	Outline\ Projects	ESC Model City Structuring, MoE	Organic waste Reduction in SR
1	Problems to be solved (Objectives)	Hierarchical Role	Awareness Raising Disposal facility
2	Output 1	National Committee	City Mechanism setup
3	Output 2	ASEAN criteria Translation	Local Ordinance
4	Output 3	Attending Workshops	Meeting and Workshops
5	Output 4	Monitoring ESC Projects	Organic Waste Bins Provision in Selected Markets
6	Sustainability	Will extend to major cities.	Remaining use segregation concept

Waste Management is the critical Aspect of ESC Model City

SWOT analysis

STRENGTH

- Having the appropriate framework
- Having the right Concept for dealing with the real status and problems.
- Having Regional Support and Local Commitment

OPPORTUNITY

- Government Vision
- People need for good sanitation.
- Private sectors Participation
- NGOs involvement

WEAKNESS

- Long term implementation, slowly out come appearance.
- Lower income people are rarely acceptance
- Lack of MSW database.

THREAT

- Rapid population growth
- Gradually behavior changing.

Recommendation for the next step

- Looking for further assistance and support for MSW management: Database improvement and Awareness Raising.
 - Looking for improving other key aspects: wastewater treatment, Eco-Housing, greenery, low carbon city, renewable energy...
 - Implementing the same time in same action in the whole region.
 - Establish The ESC Model City Criteria for contest program.
-
